Participant Information Sheet - Focus group academics

Study title: THE **CAPIS** research project – Core **A**thletic **P**erformance-based **I**ntervention **S**et for **A**thletes

HUMAN RESEARCH ETHICS COMMITTEE APPROVAL NUMBER: H-2022-***

PRINCIPAL INVESTIGATOR: Jennifer Stone

STUDENT RESEARCHER: Andrés F. Loaiza-Felipe

STUDENT'S DEGREE: PhD student

Dear Participant,

You are invited to participate in the research project described below.

What is the project about?

Athletes and sport-related professionals need the best evidence about which athletic performance-based training interventions work best and are safe. The CAPIS research project aims to identify the most relevant results for athletic performance-based training interventions in athletes. The CAPIS research project will help us to reach an agreement on which athletic performance outcomes should be measured in sport research studies, and we call this 'Core Outcome Set'.

Who is undertaking the project?

This project is being conducted by Andrés F. Loaiza-Betancur. The CAPIS research project will form the basis for the degree of Doctor of Philosophy in Medicine at Adelaide University under the supervision of Dr Jennifer Stone.

Why am I being invited to participate?

You are being invited as you are a key professional in athletic performance-based training interventions. Your routine or research experiences are really important. We want to know what

is important to you when implementing or performing athletic performance-based training interventions and what impact they have on you.

Inclusion	Exclusion
University lecturers, post-graduate sports science students, or teaching staff in sport science, or related disciplines (i.e., exercise science)	Football academics who are not proficient in either English or Spanish (i.e., not able to participate in the study in at least one of these languages)

What am I being invited to do?

You are being invited to focus groups online on Microsoft Teams. To take part, you will need access to the internet through a phone, tablet, or computer. Each focus group will take 30-90 minutes. You will be video- and audio-recorded during the focus group to make sure that what you say will be correctly documented. Only the audio transcriptions will be analysed. This will be carried out using Microsoft Teams and checked by the lead investigator. The Adelaide University account will be used, which ensures your security. After the online focus group, the focus group will be transcribed, and as soon as the analysis is finalised, your name and any individual or non-public organizations mentioned during the focus groups will be removed or replaced with numerical labels.

Before the focus group, you will receive an email with an online form asking you to complete a consent form to confirm that you are happy to take part in the CAPIS research project. This form will also ask you to fill out some background information listed at the end of the consent form.

- Gender (female/male)
- Age
- Country
- Level of education
- Ethnicity
- First language
- Months/years of experience (e.g., as a lecturer)
- Occupation (e.g., self-employed, employed, retired)
- Competition level (e.g., national, international, competing/working for the national team)

How much time will my involvement in the project take?

Each focus group will take 30 to 90 minutes, and these will be conducted only once. This is a volunteer opportunity, and your participation is greatly appreciated. You or other participants will not be paid.

Are there any risks associated with participating in this project?

The CAPIS research project will not involve any major risk if you take part in it. Sometimes talking about your experience can generate emotional discomfort. You can take a break or stop taking part at any time.

What are the potential benefits of the research project?

There are no direct benefits of taking part in the CAPIS research project.

Can I withdraw from the project?

Participation in the CAPIS research project is completely voluntary. If you agree to participate, you can withdraw from the study at any time by choosing not to complete the focus group. But if you decide to complete it, it will only be possible to withdraw your data and individual contribution up until the point at which recordings have been transcribed and de-identified, after which withdrawal may no longer be possible. Because after the analysis, your name and any individual or non-public organizations you mentioned during the focus groups will be removed or replaced with numerical labels, we might not be able to identify and remove, change, or delete your individual contributions. If you do want to stop taking part in the study, any anonymous data collected until your withdrawal will be kept in the study. It may be used within scientific publications reporting CAPIS research project results.

What will happen to my information?

This project will need to use information from you. This information will include your name and contact details, as well as details about where you work, your role, and your years of experience. Researchers will use this information to ensure the research is being done properly. After the analyses are done, your data will have a numerical label instead, and after this point, you will no longer be identifiable. Your information will be kept safe and secure following the Adelaide University guidelines for storing confidential or sensitive data. You and all the participants' data will be stored in a 'Home Drive (U:)' authorized by Adelaide University. The results of the CAPIS research project will be disseminated through scientific publication and an international conference. Once the CAPIS research project has been finalized, some of the data will be kept for at least 5 years after the date of publication, as stated in the General Disposal Schedule No. 24 for South Australian Universities, on secure storage, which will be provided to Adelaide University. All the data stored will only have a numerical label attached to it. Any identifying data will be destroyed. After these 5 years, the stored data will also be destroyed. Your data will not be shared outside of Australia. Your information will only be used as described in this participant information sheet, and it will only be disclosed according to the consent provided, except as required by law.

Who do I contact if I have questions about the project?

If you have any questions, you can contact the research leader or the project manager through the following email addresses:

Andrés F. Loaiza-Betancur, research leader

Email: andresfelipe.loaizabetancur@adelaide.edu.au

Jennifer Stone, project manager

Email: j.stone@adelaide.edu.au

Has this study been approved by a Human Research Ethics Committee?

The study has been approved by the Adelaide University Human Research Ethics Committee (HREC) (approval number H-2022-xxx). This research project will be conducted according to the NHMRC National Statement on Ethical Conduct in Human Research 2023.

What if I have a complaint or any concerns?

Questions

If you have questions about the study, you can contact the research team:

Name: Andrés F. Loaiza-Betancur

Phone: +61 8 8313 4880

Email: andresfelipe.loaizabetancur@adelaide.edu.au

Insurance and Compensation

The study has been indemnified by Adelaide University, which is enforceable by a participant to seek compensation in addition to your right to seek compensation under the common law through the legal system in legal proceedings.

Complaints

If you wish to speak with an independent person regarding concerns or a complaint about this study, the University's policy on research involving human participants, or your rights as a participant, please contact the Human Research Ethics Committee's Secretariat on:

Phone: +61 (08) 8302 6330

Email: hrec@adelaide.edu.au

Post: Research Services, Level 3, Rundle Mall Plaza, 50 Rundle Mall, ADELAIDE SA 5000

Any complaint or concern will be treated in confidence and fully investigated. You will be informed of the outcome.

If I want to participate, what do I do?

If you would like to take part, please complete the online consent form. This form will also ask you to fill out some background information listed at the end of the online consent form. If it is required, the research team will organise a meeting before the focus group if you want to ask any further questions. Once this is done, the research team will email you to organise a convenient time for the focus group.

Yours sincerely,

PhD candidate Andrés F. Loaiza Betancur.

Professor Jennifer Stone
